**Hole 12**

Midterm election years, such as 2022, are historically the most volatile of the four-year presidential cycle for the stock market. However, in general, just getting past the date of the midterm election has been a positive catalyst for stocks, regardless of which party wins the election. The S&P 500 has been up by an average of 32% one year out from the midterm year bottom.

According to Strategas, when was the last midterm year in which the S&P 500 actually declined in the following 12-month period?

A. 1946
B. 1962
C. 1974
D. 2002

*Sponsored by The Savides Group of Baird*

Answer: A. 1946 Source: STRATEGAS – A Baird Company
